Summary

A resourceful, reliable, and hard-working software developer with a background in management, sales, military and hospitality. With a passion to succeed, learn and grow within the technology industry. A fast learner who promotes innovative strategies to accomplish tasks. Motivated and dedicated to making a team a little better one day at a time.

Skill

HTML, CSS and JavaScript. | Mern stack, Node, Express and React.js, MongoDB |MySQL & NoSQL, GraphQL, IndexDB databases | Bootstrap, jQuery, Bulma | OOP and Functional programming syntaxes |ORM, Sequelize, Mongoose, several other NPM's | Google and React developer tools | Agile development methodology | Git and GitHub workflow | State management | Data-types | Progressive Web Applications | Google and React Developer Tools

Projects

A Day in the Life of the Smoky Mountains

This application is a collaborative front-end project developed in a tight window of time detailing the up-to-date conditions of The Great Smoky Mountains National Park. It is designed to create a convenient interface for park guests. This website includes weather, park announcements, visitor center information and a brief history.
Technologies used: HTML, CSS, JavaScript, Bulma, Third-party web Api's
Link to deployed app: https://zombiewok28.github.io/A-Day-In-The-Smoky-Mountains/
Link to GitHub Repository:https://github.com/zombiewok28/A-Day-In-The-Smokey-Mountains

Into the Looking Glass

This project is a collective full-stack application developed in a limited time window to create a community for junior developers transitioning into the workforce. Some of the features include a blog, where registered and signed in members can create posts and comment on others and a glossary with terminology to reference.
Technologies used: HTML, CSS, JavaScript, Node.js, Express.js, MySql, Sequelize, NPM's

Quick-Track:

Quick track is a full-stack application that tracks users' caloric intake & provides dietary tools. The app was developed in 10-days. In order to access the website's features you must sign-up and login. Those features include a Api that allows users to search for foods and in return receive a detailed nutrition list about the food(s) they inquired about, meal tracker and various diet examples.
Technologies used: Javascript, CSS, MERN Stack(MongoDb, Express, React,Node.js), GraphQL, React-materialize, React-router
Link to GitHub Repository: https://github.com/joshuapward2/quick-track-v2
